Review of Dental Education began eighteen months ago.

Since then, Board staff have met with:
The Florida Department of Health, and the Surgeon General
The Florida Dental Association
The Florida Agency for Health Care Administration (Medicaid)

In addition, staff synthesized material from:
Recent Florida Department of Health Reports and White Papers
Recent American Dental Association Reports
Recent Pew Center on the States Reports
Statistical Websites / National Academy for State Health Policy
SUS Expenditure Analysis, and SUS Medical Education Funding Report
Three Converging Studies

Dental School Costs

• Models vary, but, almost without exception, dental education is one of higher education’s most costly endeavors.

• Lake Erie College of Medicine is opening a new dental school in which $52M will be invested.

• The University of Florida Dental School has a $60M budget.

• On average, graduates leave UF with $154K of debt.
More Dentists: Basic Numbers

Florida has 11,272 dentists with active licenses.

Florida ranks 4th nationally behind California, Texas, and New York in numbers of dentists.

Florida approaches the national average in dentists per capita.

More Dentists Needed?

To Recap:

Florida’s dental workforce has unused capacity and a relatively young, hard working dental workforce. Projections for future dentists in Florida out-pace expectations of retirements.

The projected out-pacing of future dentists does not take into account the planned Lake Erie College of Medicine School of Dentistry which will open in 2012 and graduate 100 additional dentists per year.
Ethnic Disparity

Figure 1.5. Distribution of Race/Ethnicity among Respondents Practicing in Florida

- White: 69.5%
- Hispanic: 18.3%
- Asian: 3.0%
- Black: 3.0%
- Other: 6.1%

What Are the Right Questions to Ask?

How can Florida provide dental services to the most needy in the context of geographical access and Medicaid challenges?

Will producing more dentists most efficiently address this problem?
Resident to Dentist Ranges

Note: Resident-to-dentist ranges are based on quartile rankings of Florida counties in residents per dentist.

Source: Workforce Survey of Dentists, 2009-10
Conclusion:

“Dentist workforce size is not a problem, nor is it likely to be in the predictable future. The real problem is where the dentists are in relation to under-served populations.” --American Dental Association

This national dilemma is verified by the March 2011 Florida Department of Health Dental Workforce Survey.

Almost 1/3 of Florida’s dentists reside in two counties.
Florida’s challenges are compounded by its geography, its rural/urban differentiation, the resultant geographic distribution of its citizens by socio-economic status, and its Medicaid status.

This results in Florida’s having one of the poorest track records in the U.S. with regard to providing dental services to the underserved.

“An estimated 80% of dental disease occurs in approximately 20% of Florida’s population, many of whom are disadvantaged and dependent on Medicaid.” --Florida Department of Health

“Florida is really failing to do what it needs to do to ensure that children have access to dental care. It’s not even a close call.”

-- Pew Center on the States
Florida’s Public Health Dentists

Figure 3.8. Respondents Practicing in Non-Office Settings, by Practice Setting Type

- County Health Department: 117
- Other (Unspecified): 117
- Academic Institution: 109
- Community Health Center: 85
- State Correctional Facility Clinic: 60
- VA Clinic: 40
- Federally Qualified Health Center: 23
- Military Facility Clinic: 23
- Other State Government Clinical Setting: 13

Source: Workforce Dental Survey, 2009-10
To Recap: Florida’s dentists are not living and practicing in geographical areas of underserved need and/or they are not providing services to the underserved irrespective of where they reside.
Medicaid dental reimbursements and services in Florida are the lowest in the country.

Medicaid adult dental coverage is virtually on an “emergency only” basis; 21 of Florida’s 67 counties have no Medicaid providers, while 32 out of 67 have no pediatric dentists who take Medicaid.

Florida Licensed Dentists: approximately 11,000
Enrolled Medicaid Providers: approximately 1,500
Active Medicaid Providers: approximately 1,200
Figure 6.7. Reasons Respondents in Private Practice Do Not Accept Medicaid

- Practice at Full Capacity: 7.5%
- Concerned about Fraud Issues: 8.6%
- Liability Issues: 9.8%
- Services Not Covered by Medicaid: 16.6%
- Billing Requirements: 25.2%
- Too Much Paperwork: 33.5%
- Low Compensation: 56.3%
- Unspecified Other: 18.8%

Options

Florida Department of Health’s 2009 Oral Healthcare Workforce Ad Hoc Committee report ranked new dental schools as 25th out of 50 strategic options in terms of impact, and 50th out of 50 strategic options in terms of feasibility.

Options include:
• Addressing Medicaid challenges
• Revising Florida dental licensing process
• Creating feeder programs to address ethnic under-representation.
• Providing incentives to dentists to practice in rural and underserved communities.
• Creating loan-forgiveness programs for dental students.
