FLORIDA DEPARTMENT OF EDUCATION

Submitted By: MGT OF AMERICA, INC.

November 8, 2004

#### INTRODUCTION

The Florida Board of Governors (BOG) is in the process of finalizing a strategic plan that establishes goals for the development of the state's eleven universities between 2003-04 and 2012-13. In particular, the BOG and universities have established goals and plans for degree production and an expanded research capacity. The BOG has adopted two broad types of degree production goals:

- to attain the national average in degrees awarded per capita by level by 2012-13, where the relevant population base is defined as the 18-34 year old population, and
- to award 50% of all degrees in nine targeted program areas that have been identified by the Board and other groups as being critical for the development of the state's economy.

In response to a BOG request, each of the universities submitted plans in June 2004 for degree production by level and major for each year between 2003-04 and 2012-13.

MGT of America, Inc., was retained by the Office of the Chancellor to assist in the analysis of university plans. As part of its six-week assignment, MGT was to:

- examine the differences between the BOG goals and university plans for degree production by level,
- examine the difference between the BOG goals and university plans for degree production in targeted programs,
- identify challenges facing the BOG based on these analyses,
- propose potential strategies that the BOG might adopt for reaching the goals, and
- develop estimates of the operating costs and capital investments that will be required to reach the degree production goals.

Additionally, MGT compiled a brief summary of university plans that were submitted in late October 2004 related to expanded research capacity.

The following document is a summary of the analyses conducted by MGT. The pages that follow begin with a general overview of findings, challenges, strategies and costs. Successive sections provide an increasingly more detailed treatment of analyses for each of the goals. The appendix includes further information on the BOG planning process, national benchmarks, and the study methodology.

## SECTION 2 EXECUTIVE SUMMARY

#### **EXECUTIVE SUMMARY**

The Board of Governors (BOG) has established goals for overall degree production by level as well as for certain target high priority programs. This report provides an analysis of key challenges facing the BOG in meeting the degree production goals and the goals for targeted programs in its Y-Axis strategic plan. The report suggests potential strategies for BOG consideration and estimates the operating costs and capital investment for reaching the BOG goals.

#### Observations Related to Degree Production Goals

- The universities' plans, if fulfilled, essentially will meet the overall BOG goal of reaching the national level of degrees awarded for population age 18-44 by 2012-13.
  - Bachelor's Degrees: The sum of institutional plans is 97.8% of the BOG goal for 2012-13. Institutional plans are 1,279 degrees under the goal of 58,622 awards in 2012-13.
  - Master's Degrees: The sum of institutional plans exceeds the BOG goal by 8.9% for 2012-13. Institutional plans are 1,580 degrees over the goal of 17,845 awards in 2012-13.
  - Doctoral Degrees: The sum of institutional plans is more than double the BOG goal for 2012-13. Institutional plans are 1,783 degrees over the goal of 1,508 awards in 2012-13.
  - First Professional Degrees: The sum of institutional plans exceeds the BOG goal by 0.7% for 2012-13. Institutional plans are 15 degrees over the goal of 2.278 awards in 2012-13.

#### Observations Related to Degree Production in Goals for Targeted Programs

- Implementing the universities' plans for increased degree production in targeted programs will not meet the BOG goal by 2012-13. Institutional plans will be 3,101 degrees short of the BOG goal for awarding 50% of the degrees in targeted programs. The shortfall is most pronounced at the bachelor's level. Excess degree production exists in both targeted and nontargeted programs at the doctoral level in 2012-13.
  - Bachelor's Degrees: The sum of university plans for degrees granted in targeted programs is 86% of the imputed BOG goal for 2012-13. Institutional plans are 4,016 degrees below the imputed BOG goal of 29,258 bachelor's degrees for 2012-13.
  - Master's Degrees: The sum of university plans for degrees granted in targeted programs is 99% of the imputed BOG goal for 2012-13. Institutional plans are 116 degrees below the imputed BOG goal of 8,906 master's degrees for 2012-13.
  - Doctoral Degrees: The sum of university plans for degrees granted in targeted programs is 238% of the imputed BOG goal for 2012-13. Institutional plans are 1,040 degrees above the imputed BOG goal of 753 doctoral degrees for 2012-13.
  - First Professional Degrees: The sum of university plans for degrees granted in targeted programs is 99.6% of the imputed BOG goal for 2012-13. Institutional

plans are 9 degrees below the imputed BOG goal of 2,202 professional degrees for 2012-13.

#### Challenges Related to Meeting the BOG Goals

- Additional opportunities to produce 1,279 more bachelor's degrees than are currently envisioned in university plans will need to be found.
- University plans for growth exceed BOG goals at the graduate level, but fall short at the undergraduate level.
- Not meeting bachelor's degree production goal may limit the applicant pool for planned growth in graduate degrees.
- Despite the fact that the collective plans will result in Florida awarding degrees at rates by level that are near or surpass the national average, significant portions of the state may remain without adequate geographic access to university programs.
- Some of the university plans for growth may prove to be more aggressive than can be achieved by 2012-13.
- Additional means to attract \$236 million in sponsored funding for research will need to be identified to reach the BOG goal for building world-class academic programs and research capacity.

#### Potential Strategies for Board of Governors Consideration

- Develop an annual performance monitoring system where university boards of trustees report to the BOG on progress in meeting 2012-13 and interim degree production goals.
- Encourage universities, especially those with lower than average planned growth rates at the bachelor's level, to develop more aggressive growth goals.
- Encourage universities, especially those with significantly higher than average planned growth rates at the graduate level, to develop less aggressive goals and, as appropriate, focus more attention at the bachelor's level.
- Encourage universities to reprioritize growth plans from lower priority program areas to targeted programs.
- Revise doctoral program approval procedures, as necessary, to ensure resources are directed to new programs that specifically respond to state goals and needs.
- Analyze college participation rates at each level by county of residence to determine if geographic access challenges still exist. Develop plans to establish new branch campuses and/or institutions in any areas identified as having major geographic access issues.
- Provide incentives to students to seek degrees in targeted programs.
- Prioritize the recommended funding for capital projects by their relation to the BOG goals.

#### Annual Operating Cost Estimates

- Annual operating costs are estimated to increase significantly if either the university plans or the BOG goals for expanded degree production are to be achieved:
  - \$873 million per year for university plans
  - \$694 million per year for BOG goals

- The principal factor in explaining the \$179 million difference in operating fund requirements between the university plans and the BOG goals is at the doctoral degree level. The university plans call for 1,783 more doctoral degrees awarded per year than required by the BOG goals, with an additional requirement for operating funds of \$176 million.
- Of the \$873 million in estimated spending requirements for expanded degree production in the university plans, \$536 million are projected for programs in the 9 targeted programs areas.

#### Capital Investment Projections

- Capital investment in new university facilities is estimated to increase significantly if either the university plans or the BOG goals for expanded degree production are achieved:
  - \$2.1 billion for university plans
  - \$1.4 billion for BOG goals
- The principal factor in explaining the \$663 million difference in capital investment between the university plans and the BOG goals is at the doctoral degree level. The university plans call for 1,783 more doctoral degrees awarded per year than required by the BOG goals, with an additional requirement for capital investment of \$653 million.
- If the BOG goals for degree production by level are to be attained, \$955 million of the total \$1.433 billion are estimated to be related to increases in the numbers of bachelor's degrees.

#### Summary

The university plans, if fulfilled, provide a strong basis for achieving the BOG goals. Since funding the estimated operating costs and capital investment for the increased number of degrees will be a challenge, the BOG and universities must set priorities that are closely attuned to state needs.

# SECTION 3 OVERVIEW OF OBSERVATIONS, CHALLENGES, STRATEGIES, AND COSTS RELATED TO EACH GOAL

## OVERVIEW OF OBSERVATIONS, CHALLENGES, STRATEGIES, AND COSTS RELATED TO EACH GOAL

#### **BACHELOR'S DEGREE PRODUCTION**

#### **Observations**

The sum of university plans for bachelor's degree production falls 1,279 degrees (or 2.2%) short of the BOG goal to produce 58,622 bachelor's degrees per year by 2012-13.

Even though the university plans fall short of the BOG goal, they represent considerable progress toward closing the gap between the state's recent 45th rank in baccalaureate production and the goal to be at the national average.

Six universities plan for growth in degree production at a rate equal to or greater than the 41% BOG system-wide growth goal at the bachelor's level:

- FAMU 111%
- FGCU 175%
- UCF 42%
- USF 47%
- UWF 78%
- NCF 52%

Two universities' planned growth rates in degree production call for more than doubling the number of degrees awarded at the bachelor's level:

- FGCU 175%
- FAMU 111%

Five universities plan for growth in bachelor's degree production at a rate less than the 41% BOG system-wide goal:

- FAU 32%
- FIU 37%
- FSU 22%
- UF 6%
- UNF 33%

Twenty-five percent of the planned growth in FTE enrollment at the undergraduate level is expected to occur at branch campuses and other extended locations rather than at the current main campuses.

 USF's planned growth at branch campuses and other extended locations accounts for 49% of the SUS total growth in off-campus production of bachelor's degrees.

#### Challenges

Additional opportunities to produce 1,279 more bachelor's degrees than are currently envisioned in university plans will need to be found if the BOG goal is to be achieved.

Each of the universities will need to achieve their respective levels of planned growth to reach 97.8% of the BOG goal.

The universities will need to implement 28 planned new degree programs to attract a portion of the planned growth.

Some regions of the state may continue to face a lack of adequate geographic access to bachelor's degree programs.

The expanded level of undergraduate enrollment will likely create a demand for increased funding for both Bright Futures and need-based financial aid.

#### Potential Strategies for Board of Governors Consideration

Develop an annual performance monitoring system where university boards of trustees report to the Board of Governors on progress in meeting 2012-13 and interim baccalaureate degree production goals.

Encourage universities, especially those with lower than average planned growth rates at the bachelor's level, to develop more aggressive growth goals.

Analyze college participation rates at the baccalaureate level by county of residence to determine if geographic access challenges still exist. Develop plans to establish new branch campuses and/or institutions in any areas identified as having major geographic access issues.

Extend the time frame for achievement of bachelor's degree production goals beyond 2012-13.

#### **Projected Costs**

The estimated additional annual operating cost for expanded bachelor's degree production is:

- \$438 million to achieve the university plans for 15,228 additional degrees.
- \$474 million to achieve the BOG goal for 16,507 additional degrees.

The estimated one-time capital investment for new space to handle expanded bachelor's degree production is:

- \$881 million to achieve the university plans for 15,228 additional degrees.
- \$955 million to achieve the BOG goal for 16,507 additional degrees.

#### **MASTER'S DEGREE PRODUCTION**

#### **Observations**

The sum of university plans for master's degree production exceeds the BOG goal to produce 17,845 degrees per year by 2012-13 by 1,580 degrees, or 8.9%.

Four universities plan for growth in degree production at a rate equal to or greater than the 41% BOG system-wide growth goal:

- FAMU 166%
- FGCU 198%
- FSU 52%
- UF 71%

Two universities' planned growth rates in degree production call for more than doubling the number of degrees awarded at the master's level:

- FGCU 198%
- FAMU 166%

Six universities plan for growth in master's degree production at a rate less than the 41% BOG system-wide growth goal:

- FAU 33%
- FIU 37%
- UCF 38%
- UNF 17%
- USF 38%
- UWF 33%

New College of Florida, as an undergraduate liberal arts college, has no plans to offer master's degrees.

Twenty-nine percent of the planned growth in FTE enrollment at the Graduate I level is expected to occur at branch campuses and other extended locations rather than at the current main campuses.

#### **Challenges**

The universities will need to implement 29 planned new degree programs to attract a portion of the planned growth.

Some regions of the state may continue to face a lack of adequate geographic access to master's degree programs.

The BOG will need to ensure that scarce fiscal resources available to state universities are directed to degree levels with the greatest need.

#### Potential Strategies for Board of Governors' Consideration

Develop an annual performance monitoring system where university boards of trustees report to the Board of Governors on progress in meeting 2012-13 and interim master's degree production goals.

Encourage universities, especially those with significantly higher than average planned growth rates at the master's level, to develop less aggressive goals and, as appropriate, focus more attention at the bachelor's level.

Analyze college participation rates at the master's level by county of residence to determine if geographic access challenges still exist. Develop plans to establish new branch campuses and/or institutions in any areas identified as having major geographic access issues.

#### **Projected Costs**

The estimated additional annual operating cost for expanded master's degree production is:

- \$159 million to achieve the university plans for 6,684 additional degrees.
- \$122 million to achieve the BOG goal for 5,104 additional degrees.

The estimated one-time capital investment for new space to handle expanded master's degree production is:

- \$341 million to achieve the university plans for 6,684 additional degrees.
- \$260 million to achieve the BOG goal for 5,104 additional degrees.

#### **DOCTORAL DEGREE PRODUCTION**

#### **Observations**

The sum of university plans for doctoral degree production exceeds the BOG goal to produce 1,508 degrees per year by 2012-13 by 1,783 degrees, or 118.2%.

Eight universities plan for growth in degree production at a rate equal to or greater than the 13% BOG system-wide growth goal:

- FAMU 1591%
- FAU 154%
- FIU 225%
- FSU 65%
- UCF 171%
- UF 110%
- UNF 720%
- USF 119%

Only one university plans for growth in degree production at a rate less than the 13% goal:

■ UWF – 7%

FGCU, which awarded no doctorates in 2003-04, plans to award 15 degrees at this level in 2012-13.

New College of Florida, as an undergraduate liberal arts college, has no plans to offer doctoral degrees.

Two percent of the planned growth in FTE enrollment at the graduate II level is expected to occur at locations other than the current main campuses.

At planned levels of doctoral awards, four universities will change one Carnegie Classification and one university will change by two Carnegie Classifications.

#### Challenges

The universities will need to implement 33 planned new degree programs to attract a portion of the planned growth.

One university (UF) has plans that call for it to account for 96% of the BOG system-wide goal for doctoral degree production.

Some regions of the state may continue to face a lack of adequate geographic access to doctoral degree programs.

Significant (and potentially unapproved) changes in institutional mission are inherent in university plans for doctoral degree production.

Fiscal resources are unlikely to be available to state universities in amounts necessary to achieve planned expansion at the doctoral level.

#### **Potential Strategies for BOG Consideration**

Develop an annual performance monitoring system where university boards of trustees report to the Board of Governors on progress in meeting 2012-13 and interim doctoral degree production goals.

Encourage universities, especially those with significantly higher than average planned growth rates at the doctoral level, to develop less aggressive growth plans and, as appropriate, focus more attention on the bachelor's level.

Analyze college participation rates at the doctoral level by county of residence to determine if geographic access challenges still exist. Develop plans to establish new branch campuses and/or institutions in any areas identified as having major geographic access issues.

Revise doctoral program approval procedures, as necessary, to ensure that resources are directed to new programs that specifically respond to state goals and needs.

#### **Projected Costs**

The estimated additional annual operating cost for expanded doctoral degree production is:

- \$183 million to achieve the university plans for 1,849 additional degrees.
- \$7 million to achieve the BOG goal for 66 additional degrees.

The estimated one-time capital investment for space to handle expanded doctoral degree production is:

- \$677 million to achieve the university plans for 1,849 additional degrees.
- \$24 million to achieve the BOG goal for 66 additional degrees.

#### PROFESSIONAL DEGREE PRODUCTION

#### **Observations**

The sum of university plans for professional degree production closely matches the BOG goal to produce 2,278 degrees per year by 2012-13; the university plans exceed the goal by 15 degrees, or just 0.7%.

Three universities plan for growth in professional degree production at a rate equal to or greater than the 57% BOG system-wide growth goal:

- FAMU 244%
- FSU 102%
- USF 122%

One university plans for growth in professional degree production at a rate less than the 57% BOG goal:

■ UF – 26%

Seven universities did not include any plans for production of professional degrees in their submissions to the BOG.

Sixty-seven percent of the planned growth in FTE enrollment for law students over the same period is expected to occur at locations other than the current main campuses - mostly reflecting the fact that the new FAMU law school is being developed in Orlando rather than in Tallahassee.

#### Challenges

Program-level analyses will be needed to distinguish between projected overproduction of pharmacy graduates and underproduction of medical graduates.

The universities, on average, will need to reach 98% of their planned growth amounts for the state university system to reach the BOG goal.

Some regions of the state may continue to face lack of adequate geographic access to professional degree programs.

Pending university plans for new medical schools are not yet included in planned levels of production of professional degrees.

#### Potential Strategies for BOG Consideration

Develop an annual performance monitoring system where university boards of trustees report to the Board of Governors on progress in meeting 2012-13 and interim professional degree production goals. Conduct a careful analysis of plans presented for new programs at the professional level to ensure they are responsive to high priority state needs.

#### **Projected Costs**

The estimated additional annual operating cost for expanded professional degree production is:

- \$93 to achieve the university plans for 904 additional degrees.
- \$92 million to achieve the BOG goal for 889 additional degrees.

The estimated one-time capital investment for new space to handle expanded professional degree production is:

- \$197 million to achieve the university plans for 904 additional degrees.
- \$194 million to achieve the BOG goal for 889 additional degrees.

#### **TOTAL DEGREE PRODUCTION**

#### **Observations**

Currently, only one university nationally enrolled more than 50,000 headcount students in 2001. To achieve their plans for degree production, three Florida universities expect to surpass the 50,000-student threshold:

- USF 58.802
- UF 55,239
- UCF 51,908

FTE enrollment of 208,771 is planned to occur on the main campuses of the SUS institutions and 39,012 FTE on their extended campuses.

FAMU plans to expand its degree production by 136% between 2003-04 and 2012-13, thereby growing in the coming decade more than in its entire history to date.

#### **Challenges**

University plans for growth exceed BOG goals at the graduate level, but fall short at the undergraduate level.

Some of the university plans for growth may prove to be more aggressive than can be achieved by 2012-13.

Not meeting bachelor's degree production goals may limit the applicant pool for planned growth in graduate degrees.

Some institutions may become too large to continue to function as responsive, efficient universities that meet regional and statewide needs.

Despite the fact that the collective plans will result in Florida awarding degrees at rates by level that are near or surpass the national average, significant portions of the state may remain without adequate geographic access to university programs.

#### Potential Strategies for BOG Consideration

Develop an annual performance monitoring system where university boards of trustees report to the Board of Governors on progress in meeting 2012-13 and interim professional degree production goals.

Encourage universities, especially those with significantly higher than average planned growth rates at the graduate level, to develop less aggressive goals and, as appropriate, focus more attention at the bachelor's level.

Analyze university participation rates by county of residence to determine if geographic access challenges still exist. Develop plans to establish new branch campuses and/or institutions in any areas identified as having major geographic access issues.

#### **Projected Costs**

The estimated additional annual operating cost for expanded degree production across all levels is:

- \$873 million to achieve the university plans for 24,665 additional degrees.
- \$694 million to achieve the BOG goal for 22,566 additional degrees.

The estimated one-time capital investment for new space to handle expanded degree production across all levels is:

- \$2.1 billion to achieve the university plans for 24,665 additional degrees.
- \$1.4 billion to achieve the BOG goal for 22,566 additional degrees.

#### **BACHELOR'S DEGREE PRODUCTION IN TARGETED PROGRAMS**

#### **Observations**

Across all 9 targeted program areas, university plans anticipate awarding 7,933 additional bachelor's degrees, which is 4,016 degrees fewer than imputed BOG goal of 11,949.

University plans fall short of imputed BOG goals for bachelor's degree production in 7 of the 9 targeted program categories:

- Critical needs in education
- Critical needs in health care
- Emerging technologies mechanical science and manufacturing
- Emerging technologies natural science and technology
- Emerging technologies medical science and health care
- Emerging technologies design and construction
- Economic development high wage/high demand occupations

University plans surpass imputed BOG goals for bachelor's degree production in 2 of the 9 targeted program categories:

- Emerging technologies computer science and information technology
- Emerging technologies electronic media and simulation

University plans for bachelor's degree production surpass the *de facto* BOG goal for Educated Citizenry & Workforce, the 10<sup>th</sup> category that represents the balance of all nontargeted programs.

#### Challenges

Several universities plan for surprisingly low growth in bachelor's degree production in some of the targeted programs.

Growth plans for 7 of the 9 targeted programs rely on very ambitious growth plans of some universities, which might be difficult to achieve.

Growth plans for 6 of the 9 targeted programs rely on only one or two universities, making attainment of the BOG goals at risk if a single university falls short of its plan.

University plans for growth in bachelor's degree production in the targeted programs are dependent on the establishment of 14 new degree programs.

#### Potential Strategies for BOG Consideration

Develop an annual performance monitoring system where university boards of trustees report to the Board of Governors on progress in meeting 2012-13 and interim bachelor's degree production goals in each targeted program.

Encourage universities to reprioritize growth plans at the bachelor's level from lower priority program areas to targeted programs.

Extend the time frame for achievement of bachelor's degree production goals in targeted areas beyond 2012-13.

#### **Projected Costs**

The estimated additional annual operating cost for expanded bachelor's degree production in targeted programs is:

- \$260 million to achieve the university plans for 7,933 additional degrees.
- \$391 million to achieve the BOG goal for 11,949 additional degrees.

The estimated one-time capital investment for space to handle expanded bachelor's degree production in targeted programs is:

- \$459 million to achieve the university plans for 7,933 additional degrees.
- \$691 million to achieve the BOG goal for 11,949 additional degrees.

#### MASTER'S DEGREE PRODUCTION IN TARGETED PROGRAMS

#### **Observations**

Across all 9 targeted program areas, university plans anticipate an increase of 3,297 master's degrees, falling short of the BOG system-wide goal of 3,413 by 116 degrees, or 3.4%.

University plans fall short of imputed BOG goals for master's degree production in 3 of the 9 targeted program categories:

- Critical needs in education
- Emerging technologies design and construction
- Economic development high wage/high demand occupations

University plans surpass imputed BOG goals for master's degree production in 6 of the 9 targeted program categories:

- Critical needs in health care
- Emerging technologies mechanical science and manufacturing
- Emerging technologies natural science and technology
- Emerging technologies medical science and health care
- Emerging technologies computer science and information technology
- Emerging technologies electronic media and simulation

University plans for master's degree production surpass the *de facto* BOG goal for Educated Citizenry & Workforce.

#### Challenges

Several universities plan for surprisingly low growth in master's degree production in some of the targeted programs.

Growth plans for 7 of the 9 targeted program areas rely on only one or two universities, making attainment of the BOG goals at risk if a single university falls short of its plan.

University plans for growth in master's degree production in the targeted programs are dependent on the establishment of 10 new degree programs.

#### **Potential Strategies for BOG Consideration**

Develop an annual performance monitoring system where university boards of trustees report to the Board of Governors on progress in meeting 2012-13 and interim bachelor's degree production goals in each targeted program.

Encourage universities to reprioritize growth plans at the master's level from lower priority program areas to targeted programs.

Encourage universities to shift growth plans at the master's level from target areas where overproduction is likely at the system-wide level to target areas where goals are not expected to be met.

#### **Projected Costs**

The estimated additional annual operating cost for expanded master's degree production in targeted programs is:

- \$88 million to achieve the university plans for 3,297 additional degrees.
- \$91 million to achieve the BOG goal for 3,413 additional degrees.

The estimated one-time capital investment for space to handle expanded master's degree production in targeted programs is:

- \$168 million to achieve the university plans for 3,297 additional degrees.
- \$174 million to achieve the BOG goal for 3,413 additional degrees.

#### **DOCTORAL DEGREE PRODUCTION IN TARGETED PROGRAMS**

#### **Observations**

Across all 9 targeted program areas, university plans anticipate awarding 1,002 additional degrees even though the 2003-04 level already exceeds the 2012-13 goal for targeted programs by 38 degrees.

University plans fall short of imputed BOG goals for doctoral degree production in none of the targeted program categories.

University plans surpass imputed BOG goals for doctoral degree production in 8 of the 9 targeted program categories:

- Critical needs in education
- Critical needs in health care
- Emerging technologies mechanical science and manufacturing
- Emerging technologies natural science and technology
- Emerging technologies medical science and health care
- Emerging technologies computer science and information technology
- Emerging technologies design and construction
- Economic development high wage/high demand occupations

No goal for doctoral degree production was imputed for one target area due to lack of a national benchmark:

Emerging technologies – electronic media and simulation

University plans for doctoral degree production surpass the *de facto* BOG goal for Educated Citizenry & Workforce.

#### **Challenges**

The universities will need to implement 16 planned new degree programs to attract a portion of the planned growth in targeted programs.

The universities also plan to implement 17 new degree programs at the doctoral level in nontargeted areas, contributing to the imbalance between BOG goals and university plans.

Significant (and potentially unapproved) changes in institutional mission are inherent in university plans for doctoral degree production.

Fiscal resources are unlikely to be available to state universities in amounts necessary to achieve planned expansion at the doctoral level.

#### Potential Strategies for BOG Consideration

Develop an annual performance monitoring system where university boards of trustees report to the Board of Governors on progress in meeting 2012-13 and interim doctoral degree production goals in targeted areas.

Encourage universities, especially those with significantly higher than average planned growth rates at the doctoral level, to develop less aggressive growth plans and, as appropriate, focus more attention on the bachelor's level.

Discourage universities from developing plans for doctoral degree programs in areas that are not high priority for degree production.

Revise doctoral program approval procedures, as necessary, to ensure that resources are directed to new programs that specifically respond to state goals and needs.

#### **Projected Costs**

The estimated additional annual operating cost for expanded doctoral degree production in targeted programs is:

- \$107 million to achieve the university plans for 1,002 additional degrees.
- The BOG goal indicates a reduction of 38 degrees, which equates to \$4.1 million in reduced investment.

The estimated one-time capital investment for space to handle expanded doctoral degree production in targeted programs is:

- \$367 million to achieve the university plans for 1,002 additional degrees.
- The BOG goal indicates a reduction of 38 degrees, which equates to \$13.9 million in reduced investment.

#### PROFESSIONAL DEGREE PRODUCTION IN TARGETED PROGRAMS

#### **Observations**

While overall plans for growth in professional degree production closely match the BOG goals, overproduction is anticipated in some target areas and underproduction in others.

University plans fall short of imputed BOG goals for professional degree production in one targeted program category:

Emerging technologies – medical science and health care (e.g., the M.D. degree)

University plans surpass imputed BOG goals for professional degree production in one program category:

Critical needs in health care (e.g., doctor of pharmacy)

University plans for professional degree production in one target area are closely aligned with imputed BOG goals:

Other High Wage/High Demand Programs (i.e., law)

#### **Challenges**

Potential new programs at the professional level are narrowly focused on specific occupations, but employment demand information is often lacking.

Potential new programs in the medical and health care areas are relatively expensive on a pergraduate basis.

Although not included in the university plans submitted for this analysis, several proposals for new medical schools are expected during the coming months.

#### **Potential Strategies for BOG Consideration**

Establish high standards of state need for new professional degree programs to be considered.

#### **Projected Costs**

The estimated additional annual operating cost for expanded professional degree production in targeted programs is:

- \$82 million to achieve the university plans for 804 additional degrees.
- \$83 million to achieve the BOG goal for 813 additional degrees.

The estimated one-time capital investment for space to handle expanded professional degree production is:

- \$175 million to achieve the university plans for 804 additional degrees.
  \$177 million to achieve the BOG goal for 813 additional degrees.

#### TOTAL DEGREE PRODUCTION IN TARGETED PROGRAMS

#### **Observations**

SUS degree production in the targeted areas, at 43% of all degrees, already exceeds the national average for public institutions at 32%.

Across all degree levels, university plans for targeted programs fall 3,101 degrees short (19%) of meeting the BOG goal of 16,137 additional degrees.

Based on imputed BOG goals for degree production in targeted programs by level, university plans for:

- Bachelor's degrees fall short of the goal by 4,016 degrees
- Master's degrees fall short of the goal by 116 degrees
- Doctoral degrees surpass the goal by 1,040 degrees
- Professional degrees fall short of the goal by 9 degrees

#### Challenges

University plans for degree production, which match BOG goals reasonably well at 2 of the 4 degree levels, are not well aligned with the BOG goals for targeted program areas.

Imputed degree production BOG goals for target programs by program and level, which are based on the national distribution of degrees awarded and the BOG overall 50% target, provide just one of many benchmarks for assessing university plans by program and level.

#### Potential Strategies for BOG Consideration

Consider alternative techniques for developing goals for each targeted program by level:

- Other options for imputing the 50% goal across levels and by program.
- Specific targets for certain programs and certain degree levels.

#### **Projected Costs**

The estimated additional annual operating cost for expanded degree production in targeted programs is:

- \$536 million to achieve the university plans for 13,036 additional degrees.
- \$561 million to achieve the BOG goal for 16,137 additional degrees.

The estimated one-time capital investment for space to handle expanded degree production in targeted programs is:

- \$1.2 billion to achieve the university plans for 13,036 additional degrees.
- \$1.0 billion to achieve the BOG goal for 16,137 additional degrees.

Capital investment for university plans is greater than that for BOG goals, even though there are fewer degrees, due to the greater number and cost of doctoral degrees included in the university plans.

#### BUILDING WORLD-CLASS ACADEMIC PROGRAMS AND RESEARCH CAPACITY

#### **Observations**

Eight universities plan to increase their average research expenditures per faculty member from all funding sources by 2012-13. The BOG goal assumed constant spending on a per faculty member basis.

Nine universities plan to increase their average research expenditures per faculty member from federal sources by 2012-13. The BOG goal assumed constant spending on a per faculty member basis.

Total sponsored research spending is planned to increase by 81%, or \$236 million short of the BOG goal to increase by 130%.

Eight universities plan to increase the rate of patents per faculty member.

New College of Florida, which has a mission for high quality undergraduate instruction, did not submit specific plans for sponsored research expenditures.

FGCU, which is still in its early years of operation, provided only partial plans for its developing research program.

#### **Challenges**

Additional means to attract \$236 million in sponsored funding for research will need to be identified to achieve the BOG goal.

The expectations for a research mission for several universities will need to be clarified.

#### **Potential Strategies for BOG Consideration**

Encourage and support universities to be more aggressive in improving their performance in rate of sponsored research support per faculty member.

Extend the time frame for achievement of research expenditure goals beyond 2012-13.

#### **Projected Costs**

The estimated additional annual operating costs for expanded research productivity cannot be specifically determined. A significant portion of the cost to expand research is imbedded in the cost to expand degree production, since the typical work assignment for faculty members includes time to conduct research and seek external funding.

The estimated capital investment for expanded research productivity cannot be specifically determined. A significant portion of the capital investment to expand research is imbedded in the capital investment to expand degree production, since the space needs formula includes research laboratory space for graduate students and faculty.

## SECTION 4 ANALYSIS OF DEGREE LEVEL GOALS AND PLANS

#### **SUMMARY OF FINDINGS**

#### **Observations**

The universities' plans, if fulfilled, essentially will meet the overall BOG goal of reaching the national level of degrees awarded for population age 18-44 by 2012-13. Analysis of the sum of institutional plans compared to BOG goals by level reveals a shortfall of 1,279 bachelor's degrees and an excess of 3,378 degrees in graduate programs in 2012-13.

208,771 FTE enrollment is planned to occur on the main campuses of the SUS institutions and 39,012 FTE on their extended campuses.

Currently, only 1 university nationally enrolls more than 50,000 headcount students (2001). To achieve their plans for degree production, 3 Florida universities expect to surpass the 50,000-student threshold:

- USF 58,802
- UF 55,239
- UCF 51,908

FAMU plans to expand its degree production by 136% between 2003-04 and 2012-13, thereby growing in the coming decade more than in its entire history to date.

#### Challenges

Additional opportunities to produce 1,279 more bachelor's degrees than are currently envisioned in university plans will need to be found.

University plans for growth exceed BOG goals at the graduate level, but fall short at the undergraduate level.

Despite the fact that the collective plans will result in Florida awarding degrees at rates by level that are near or surpass the national average, significant portions of the state may remain without adequate geographic access to university programs.

Some of the university plans for growth may prove to be more aggressive than can be achieved by 2012-13.

Imputed BOG degree production goals for target programs by program and level, which are based on the national distribution of degrees awarded and the BOG overall 50% target, provide just one of many benchmarks for assessing university plans by program and level.

The expectations for a research mission for several universities will need to be clarified.

Some institutions may become too large to continue to function as responsive, efficient universities that meet regional and statewide need.

#### Potential Strategies for BOG Consideration

Develop an annual performance monitoring system where university boards of trustees report to the Board of Governors on progress in meeting 2012-13 and interim professional degree production goals. Encourage universities, especially those with significantly higher than average planned growth rates at the graduate level, to develop less aggressive goals and, as appropriate, focus more attention at the bachelor's level.

Analyze university participation rates by county of residence to determine if geographic access challenges still exist. Develop plans to establish new branch campuses and/or institutions in any areas identified as having major geographic access issues.

#### **Projected Costs**

The estimated additional annual operating cost for expanded degree production across all levels is:

- \$873 million to achieve the university plans for 24,665 additional degrees.
- \$694 million to achieve the BOG goal for 22,566 additional degrees.

The estimated one-time capital investment for new space to handle expanded degree production across all levels is:

- \$2.1 billion to achieve the university plans for 24,665 additional degrees.
- \$1.4 billion to achieve the BOG goal for 22,566 additional degrees.

## ANALYSIS OF DEGREES BY LEVEL: OBSERVATIONS, CHALLENGES, STRATEGIES, COSTS BACHELOR'S DEGREES

	Bachelors Degrees Planned Growth					owth	
	2003-	2008-	2012-	2003-	2009-	2004-	
University	2004	2009	2013	2009	2013	2013	Observations
FAMU	1,561	2,529	3,292	62%	30%	111%	Seems very ambitious, given recent enrollment struggles
							Seems conservative given FAU mission and major population
FAU	3,778	4,528	4,985	20%	10%	32%	base
FGCU	664	1,178	1,829	77%	55%	175%	Seems very ambitious, but perhaps possible as new institution

## SECTION 5 ANALYSIS OF TARGET AREA DEGREE GOALS AND PLANS BY LEVEL

### **SUMMARY OF FINDINGS**

#### Observation

Across all degree levels, university plans for targeted programs fall 3,101 degrees short (18.8%) of meeting the BOG goal of 16,521 degrees.

Based on imputed BOG goals for degree production in targeted programs by level:

- Bachelor's degrees fall short of the goal by 4,016 degrees
- Master's degrees fall short of the goal by 116 degrees
- Doctor's degrees surpass the goal by 1,040 degrees
- Professional degrees fall short of the goal by 9 degrees

## Challenges

Several universities plan for surprisingly low growth in bachelor's and master's degree production in some of the targeted programs.

Growth plans for many of the targeted programs rely on very ambitious growth plans of some universities, which might be difficult to achieve.

Growth plans for many of the targeted programs rely on only one or two universities, making attainment of the BOG goals at risk if a single university falls short of its plan.

University plans for growth in degree production in the targeted programs are dependent on the establishment of 40 new degree programs. University plans for growth include the establishment of 51 new degree programs in non-targeted areas, including 17 at the doctoral level.

Significant (and potentially unapproved) changes in institutional mission are inherent in university plans for doctoral degree production.

Imputed BOG degree production goals for target programs by program and level, which are based on the national distribution of degrees awarded and the BOG overall 50% target, provide just one of many benchmarks for assessing university plans by program and level.

#### Potential Strategies for BOG Consideration

Develop an annual performance monitoring system where university boards of trustees report to the Board of Governors on progress in meeting 2012-13 and interim degree production goals in each targeted program by level.

Encourage universities to re-prioritize growth plans from lower priority program areas to targeted programs.

Encourage universities to shift growth plans from target areas where overproduction is likely at the system-wide level to areas where goals are not expected to be met.

Encourage universities, especially those with significantly higher than average planned growth rates at the doctoral level, to develop less aggressive growth plans and, as appropriate, focus more attention on the bachelor's level.

Discourage universities from developing plans for doctoral degree programs in areas that are not high priority for degree production.

Revise doctoral program approval procedures, as necessary, to ensure resources are directed to new programs that specifically respond to state goals and needs.

Establish high standards of state need for new professional degree programs to be considered.

## **Projected Costs**

The estimated additional annual operating cost for expanded degree production in targeted programs is:

- \$536 million to achieve the university plans for 13,036 additional degrees.
- \$561 million to achieve the BOG goal for 16,137 additional degrees.

The estimated one-time capital investment for space to handle expanded degree production in targeted programs is:

- \$1.2 billion to achieve the university plans for 13,036 additional degrees.
- \$1.0 billion to achieve the BOG goal for 16,137 additional degrees.

Capital investment for university plans is greater than that for BOG goals, even though there are fewer degrees, due to the greater number and cost of doctoral degrees included in the university plans.

## CHALLENGES AND STRATEGIES FOR TARGETED DEGREES BY LEVEL

# SECTION 6 ESTIMATES OF OPERATING AND FIXED CAPITAL OUTLAY COSTS

## SUMMARY OF FINDINGS

## Annual Operating Cost Estimates

Annual operating costs are estimated to increase significantly if either the university plans or the BOG goals for expanded degree production are to be achieved:

\$873 million per year for university plans \$694 million per year for BOG goals

The principal factor in explaining the \$179 million difference in operating fund requirements between the university plans and the BOG goals is at the doctoral degree level. The university plans call for 1,783 more doctoral degrees awarded per year than required by the BOG goals, with an additional requirement for operating funds of \$176 million.

Of the \$873 million in estimated spending requirements for expanded degree production in the university plans, \$536 million is projected for programs in the 9 targeted programs areas.

If university plans for expanded degree production are achieved, operating budgets for five universities are projected to increase by more than \$100 million each:

- FAMU -- \$110 million
- FSU -- \$101 million
- UCF -- \$123 million
- UF -- \$168 million
- USF -- \$123 million

## Capital Investment Projections

Capital investment in new university facilities is estimated to increase significantly if either the university plans or the BOG goals for expanded degree production are achieved:

- \$2.1 billion for university plans
- \$1.4 billion for BOG goals

The principal factor in explaining the \$663 million difference in capital investment between the university plans and the BOG goals is at the doctoral degree level. The university plans call for 1,783 more doctoral degrees awarded per year than required by the BOG goals, with an additional requirement for capital investment of \$653 million.

If the BOG goals for degree production by level are to be attained, \$955 million of the total \$1.433 billion is estimated to be related to increases in the numbers of bachelor's degrees

If university plans for expanded degree production are achieved, the capital investment at eight universities is expected to increase by approximately \$100 million or more each:

- FAMU -- \$255 million
- FAU -- \$118 million
- FGCU -- \$96 million
- FIU \$209 million
- FSU -- \$238 million
- UCF -- \$285 million
- UF -- \$473 million
- USF \$287 million

## ESTIMATED REQUIREMENT FOR OPERATING FUNDS FOR EXPANDED DEGREE **PRODUCTION BY LEVEL IN 2012-13**

			BO	G Goals	Unive	rsity Plans

	Average/Total	\$ 103,257	889	\$ 91,795,473	904	\$ 93,344,328	\$ 1,548,855
All Levels	High Cost				7,163	\$ 434,838,165	
	Medium Cost				11,312	\$ 347,195,703	
	Low Cost				6,189	\$ 127,280,431	
	Average/Total		22,565	\$ 694,475,047	24,665	\$ 873,211,165	\$ 178,736,118

Notes:
The cost estimates shown represent additional annual requirements beyond the current level of operating costs.

The sum of additional costs by program area may differ from the total shown due to planned changes in the relative mix of degrees by program cost category.

	Total	22,565	\$	694,475,047	24,664	\$	873,211,165

### Notes:

The cost estimates shown represent additional annual requirements beyond the current level of operating costs.

The sum of additional costs by program area may differ from the total shown due to planned changes in the relative mix of degrees by program cost category.

## BOARD OF GOVERNORS STRATEGIC PLANNING FOR THE STATE UNIVERSITY SYSTEM

## Y-AXIS (AUGUST 2004)

Goals and Objectives	2002-03 (or as indicated)	2008-09	2012-13
I. State University System Goals			
A. Access to and Production of Degrees			
1. Bachelor	39,989	50,305	58,622
2. Master's	12,179	15,316	17,845
3. Doctoral*	1,315	1,428	1,508
4. Professional	1,380	1,864	2,278
TOTAL	54,863	68,927	80,253
5. Access/Diversity: Minority Representation in SUS Graduates as			
Percentage of Expected Representation	74%	89%	100%
B. Meeting statewide professional and workforce needs (details to	support I.A.)		
TOTAL Degrees	54,863	68,927	80,253
TOTAL Degrees in Targeted Programs	22,320	31,986	40,054
Targeted Program Degrees as % of All Degrees	41%	46%	50%
Critical Needs: Education	1,281		
2. Critical Needs: Health Professions	3,227		
3. Economic Development: Emerging Technologies	10,480		
a. Mechanical Science and Manufacturing	2,564		
b. Natural Science and Technology	2,538		
c. Medical Science and Health Care	734		
d. Computer Science and Information Technology	4,086		
e. Design and Construction	503		
f. Electronic Media and Simulation	55		
4. Economic Development: High-wage/high-demand jobs	7,332		
5. Educated citizenry/workforce (not specifically targeted)	32,543		
	+ +		
*TT1			

<sup>\*</sup>The number of doctoral degrees needed will be evaluated at the program level in consultation with universities. Florida currently produces 96% of the national average in doctoral degrees per capita, but many of these are not in fields that lead primarily to research or teaching.

## **CARNEGIE CLASSIFICATION DEFINITIONS, 2000**

## **Category Definitions**

The 2000 Carnegie Classification includes all colleges and universities in the United States that are degree-granting and accredited by an agency recognized by the U.S. Secretary of Education. The 2000 edition classifies institutions based on their degree-granting activities from 1995-96 through 1997-98. For definitions and detailed information on classification procedures, refer to the Technical Notes. In addition, important limitations are documented in The 2000 Carnegie Classification: Background and Description.

## **Doctorate-granting Institutions**

**Doctoral/Research Universities—Extensive:** These institutions typically offer a wide range of baccalaureate programs, and they are committed to graduate education through the doctorate. During the period studied, they awarded 50 or more doctoral degrees per year across at least 15 disciplines.

**Doctoral/Research Universities—Intensive:** These institutions typically offer a wide range of baccalaureate programs, and they are committed to graduate education through the doctorate. During the period studied, they awarded at least ten doctoral degrees per year across three or more disciplines, or at least 20 doctoral degrees per year overall.

## Master's Colleges and Universities

**Master's Colleges and Universities I:** These institutions typically offer a wide range of baccalaureate programs, and they are committed to graduate education through the master's degree. During the period studied, they awarded 40 or more master's degrees per year across three or more disciplines.

**Master's Colleges and Universities II:** These institutions typically offer a wide range of baccalaureate programs, and they are committed to graduate education through the master's degree. During the period studied, they awarded 20 or more master's degrees per year.

## **Baccalaureate Colleges**

Baccalaureate Colleges—Liberal Arts: These institutions are primarily undergraduate colleges with major emphasis on baccalaureate programs. During the period studied, they awarded at least half of their baccalaureate degrees in liberal arts fields.

**Baccalaureate Colleges—General:** These institutions are primarily undergraduate colleges with major emphasis on baccalaureate programs. During the period studied, they awarded less than half of their baccalaureate degrees in liberal arts fields.

**Baccalaureate/Associate's Colleges:** These institutions are undergraduate colleges where the majority of conferrals are below the baccalaureate level (associate's degrees and certificates). During the period studied, bachelor's degrees accounted for at least ten percent of undergraduate awards.

### **Associate's Colleges**

These institutions offer associate's degree and certificate programs but, with few exceptions, award no baccalaureate degrees. This group includes institutions where, during the period studied, bachelor's degrees represented less than 10 percent of all undergraduate awards.

## **Specialized Institutions**

These institutions offer degrees ranging from the bachelor's to the doctorate, and typically award a majority of degrees in a single field. The list includes only institutions that are listed as separate campuses in the 2000 Higher Education Directory. Specialized institutions include:

Theological seminaries and other specialized faith-related institutions: These institutions primarily offer religious instruction or train members of the clergy.

Medical schools and medical centers: These institutions award most of their professional degrees in medicine. In some instances, they include other health professions programs, such as dentistry, pharmacy, or nursing.

Other separate health profession schools: These institutions award most of their degrees in such fields as chiropractic, nursing, pharmacy, or podiatry.

Schools of engineering and technology: These institutions award most of their bachelor's or graduate degrees in technical fields of study.

Schools of business and management: These institutions award most of their bachelor's or graduate degrees in business or business-related programs.

Schools of art, music, and design: These institutions award most of their bachelor's or graduate degrees in art, music, design, architecture, or some combination of such fields.

Schools of law: These institutions award most of their degrees in law. Teachers colleges: These institutions award most of their bachelor's or graduate degrees in education or education-related fields.

Other specialized institutions: Institutions in this category include graduate centers, maritime academies, military institutes, and institutions that do not fit any other classification category.

#### Tribal Colleges and Universities

These colleges are, with few exceptions, tribally controlled and located on reservations. They are all members of the American Indian Higher Education Consortium.

## OVERVIEW OF METHODOLOGY FOR ANALYSIS OF GOAL ATTAINMENT

This study employed a variety of data from the Florida Board of Governors and the SUS institutions.

Enrollment and degrees awarded data submitted by the SUS institutions (June 2004) were used. Data included university enrollments and degrees awarded by institution by degree level and CIP code for the years 2003-04 through 2012-13.

BOG goals for degrees awarded for Florida were indicated in the Y-axis (August 2004) and also included projected percent of programs for targeted program areas for the years 2003-04 through 2012-13

The following steps were utilized to impute BOG degrees awarded for each target area by degree level for the years 2003-04 trough 2012-13.

## **Steps to Imputing BOG Goals**

- 1. Retrieved national data from the Integrated Postsecondary Education Data System (IPEDS) (2002-03), including the number of degrees awarded by level by public institutions using 6-digit CIP codes.
- 2. Sorted IPEDS data by targeted program area by level.
- 3. Calculated percent of total degrees awarded from IPEDS data by targeted program area by level.
- 4. Used "Targeted Program Degrees as % of All Degrees" percents from Y-axis to calculate number of degrees for each degree level (e.g., 50% in 2012-13).
- Used percent of total degrees awarded by targeted program area from national data and applied these to the targeted degree level totals calculated from the Yaxis.

Throughout the analysis, university plans were compared to BOG actual and imputed goals to ascertain differences in degree production and assist in calculating cost differences between the BOG goals and university plans.

## OVERVIEW OF METHODOLOGY FOR ESTIMATION OF OPERATING COST REQUIREMENTS

### **Major Steps**

- 1. Expenditure information was compiled from the 2002-03 SUS expenditure analysis (both the E&G and special unit reports) by two-digit CIP instructional discipline and by course level.
- 2. Cost by student major and degree level was estimated by translating cost by discipline and level information using a crossover matrix showing percentage of all courses taken by student major program for each level.
- Total expenditures by student major and by level were divided by the number of degrees awarded by student major and by level to derive the estimated cost per major by level.

### **Notes**

- Costs are expressed in 2002-03 dollars with no price inflation assumptions applied for future years.
- Cost information is based on all sources of E&G revenue; the requirement for state support would be approximately 75% of the amounts reported after deduction for student tuition and fees per the 25% of cost policy.
- Estimates assume continuation of the level of efficiency in degrees awarded per credit hour produced as existed in 2002-03.

## OVERVIEW OF METHODOLOGY FOR ESTIMATION OF CAPITAL INVESTMENT REQUIREMENTS

### **Steps**

- Information relating to space allowances per student (i.e., square feet per student)
  and construction cost per square foot were compiled from the SUS space needs
  formula to derive estimates of capital investment for new construction per
  incremental student credit hour by discipline and level.
- The derived capital investment factors by discipline and level were multiplied by the number of student credit hours produced by discipline and level to estimate the gross capital investment required by level for current enrollments per the SUS space formula and construction cost factors.
- 3. The gross required capital investment by level was divided by the number of degrees by level to derive an estimate of capital investment per degree by level.

### **Notes**

- Costs are expressed in 2002-03 dollars with no price inflation assumptions applied for future years.
- No adjustment was made to recognize that the space requirements per the SUS space needs formula have not been fully funded in recent years.
- No adjustment was made to account for new construction that has been funded in recognition of the enrollment growth that has occurred since 2002-03, the start of the 10-year timeframe in the BOG strategic planning process.
