SUS Campus Security Risk Assessment Criteria

www.flbog.edu

Pursuant to section 1006.601 (4)(c), Florida Statutes:

The campus security risk assessment tool should include a robust methodology for identifying risks and prioritizing future mitigation efforts. The tool must include the following minimum criteria:

1. **Infrastructure & Technical Systems**
    - Evaluate building types, intended operational uses, safety and security systems, and emergency backup capabilities to ensure continuity of operations
    - Assess computer systems and identify external factors that could impact emergency response efforts
2. **Safety & Mitigation Systems**
    - Review of all mitigation efforts, including safety and communication plans, metal detectors or other physical screening devices, mass communication capacities, weapon detection systems, and other risk mitigation systems
3. **Access Control & Physical Security**
    - Review of institutional access policies and procedures to buildings, laboratories, research facilities, sensitive equipment, and other critical areas within an institution
4. **Outdoor & Multi-Use Spaces**
    - Account for outdoor spaces owned or operated by a university, including athletic facilities, parking garages, recreational areas, green spaces, and other such open areas under the institution's purview
5. **Law Enforcement Integration**
    - Review institutional threat management plans, suspicious activity reporting mechanisms, and up-to-date building blueprints
    - Review law enforcement access points, partnerships, and the integration of School Guardians, if applicable
6. **Emergency Management**
    - Assess the effectiveness of the institution's incident command structure, succession plans, emergency and incident response trainings, and post-incident recovery plans
