University Measures 126

**Integration of Strategic Plan, Legislative Budget Request,
and Accountability** 127

Introduction

This 1998 Accountability Report provides data and other information about the performance of universities in the State University System on accountability measures included in the 1998-99 Performance-Based Budgeting Official Performance Ledger. The Ledger is described below. Since Florida Gulf Coast University is so new, data are not available to develop meaningful measures for it; thus, data are presented here for the other nine universities in the SUS.

The State University System received in excess of \$1.4 billion in General Revenue in 1997-98 for the ten universities to teach undergraduate and graduate students, conduct research, and provide public service. While the State University System always strives to be more efficient, it does so while maintaining or improving the quality of the numerous programs offered throughout the System. The information provided in this report is just one of several ways in which the SUS demonstrates accountability to the citizens of the state, the Legislature, and the Governor. For example, the general fiscal operations and many other functions of each university are audited by internal management auditors on a regular basis. In addition, many of the universities' operations are audited by State and Federal auditors.

Changes to Chapter 240, Florida Statutes

The 1998 Legislature amended Section 240.214, Florida Statutes, dealing with the State University System accountability process and the requirements of the annual Accountability Report. There were two major changes enacted during the most recent legislative session to this Section. First, language was added to the statute requiring that the systemwide performance standards and goals be consistent with the performance-based budgeting process delineated in Section 216.011(1) Florida Statutes. The new language further requires that the measures, "... must reflect the elements of teaching, research, and service inherent in the missions of the institutions in the State University System." Having placed specific requirements on the measures, the second major change made to the statute by the Legislature was the removal from the statutes of a list of ten specific accountability measures.

Official Performance Ledger

Section 216.011(yy), Florida Statutes, defines the performance ledger maintained by the Executive Office of the Governor. It is to be, "...the official compilation of information about state agency performance-based programs and measures, including approved programs, approved outputs and outcomes, baseline data, approved standards for each performance measure and any approved adjustments thereto, as well as actual agency performance for each measure."

Included in this Accountability Report are all of the measures listed in the 1998-99 Performance-Based Budgeting Official Performance Ledger for the State University System. They include measures established in the 1997-98 General Appropriations Act to be used with the review of academic programs, measures for performance recognition and incentives funded in the 1997-98 and 1998-99 General Appropriations Act, and performance-based incentive fund measures funded in the 1998-99 General Appropriations Act.

Other Measures

Also included in this report are six Systemwide accountability measures approved by the Board of Regents in November, 1998. Among other issues, these measures address degree productivity, graduation and retention rates, and research.

Program Performance Measures

Proviso language in the 1997-98 General Appropriations Act, see below, required the Board of Regents to use several program performance measures for academic program reviews undertaken in 1997-98.

- “From the funds in Specific Appropriations 173 through 176, the Board of Regents shall use the following criteria as program performance measures for the 1997-98 program review process, as defined in s. 240.209, Florida Statutes:
- graduation rates of first time in college students (FTIC) and AA transfer students
 - retention rates of first time in college students (FTIC) and AA transfer students
 - percent of graduates who successfully pass licensure/certification tests on the first attempt (where appropriate)
 - cost of instruction per full-time equivalent student
 - cost of degree per full-time equivalent student (including direct and indirect costs)
 - average number of refereed journal articles per ranked faculty member
 - ratio of state-funded research to externally funded contracts and grants
 - percent of students employed full-time upon graduation
 - percent of undergraduate students who are admitted to graduate school upon completion of baccalaureate degree
 - percent of undergraduate classes with less than 25 in the class section
 - ratio of ranked faculty to students
 - percent of students with excess credit hours (baccalaureate degree requirements plus 15%, excluding credit hours earned at institutions other than Florida public universities)
 - average number of university commercial versus noncommercial press books per ranked faculty member
 - number of National Merit Scholars
 - number of National Achievement Scholars
 - number of National Hispanic Scholars

The Board of Regents shall develop uniform definitions of each of these program performance measures using data from the previous academic year or the most recent data if not available for the previous academic year. The measures shall apply to the five years or span of the program review.” - - - *1997-98 General Appropriations Act*

The State University System has conducted over ninety systemwide program reviews, covering each of its disciplines at least once, and most for a second and third time. These reviews were conducted under a policy adopted by the Board of Regents in 1975 to require periodic review of all authorized programs to confirm that they meet standards of quality, efficient

management, and optimum service to their intended clients and the citizenry of the State of Florida. Subsequent to the Board Policy, Sections 240.209 (1) and (5)(b), Florida Statutes, were enacted, placing program review into law in the State of Florida.

In 1998-99, program review methodology is undergoing major changes in order to become more responsive to university needs. Data have been collected on two program reviews initiated since January 1998 on the fourteen proviso measures as specified in 1997-98 General Appropriations Act. The two program reviews initiated are Law and Public Health.

Nearly all of the comments in the following paragraphs dealing with the Law and Public Health programs were made by external consultants hired by the Board of Regents to conduct the periodic reviews of those programs.

Florida State University Law Program Review

Program Review consultants reviewed the proviso measures as requested by the Board of Regents. Several proviso measures were irrelevant to the law programs (numbers 1, 2, 5, 9, 10, 12, 14). For example, measures 1 and 2 deal with undergraduates and therefore they do not apply to a graduate program like Law. Information regarding the other measures is set forth below. The program review consultants believe that no significant issues are raised by the College's performance on any of the relevant measures.

- Measure 3. Bar examination: 85% (July 1998 Florida Bar Examination).
- Measure 4. Cost of instruction per FTE student: \$8,128 per FTE in 1996-97.
- Measure 6. Publications in refereed journals: Refereed law journals or reviews are extremely rare. Virtually all are operated entirely by students. During the period 1996-1997, the FSU faculty published 1.24 articles per capita.
- Measure 7. Ratio of externally funded contracts and grants to state-funded research: 0.25 in 1996-97.
- Measure 8. Employment of graduates: Placement rates for law graduates are commonly measured at a point six months after graduation. For the 1997 class that figure was 89%.
- Measure 11. Ratio of students to ranked faculty: 21.09/1 in 1996-97.
- Measure 13. Average number of commercial, as opposed to non-commercial, books per ranked faculty member: 0.13 for 1996-97.

Placement

Placement success has grown increasingly important to both graduating and prospective law students. National guidelines for reporting placement statistics provide for assessment of data using as a benchmark employment approximately six months following graduation (that is, employment as of early 1998 for students who graduated during 1997). Placement office data indicate that a total of 89% of the 1997 spring graduating class reported that they had secured employment within six months after graduation. This total includes 82% in full-time legal employment, 1% in part-time legal employment, 1% in full-time non-legal employment, and 5% in part-time non-legal employment. An additional 1% were not seeking employment and 1% were enrolled as full-time degree students.

This pattern is generally comparable to peer law schools nationwide. Approximately 95% of 1997 graduates remain in the southeast, with the bulk of that group remaining in Florida. Approximately 36% pursue work in government service or public interest positions. The report on the 1997 graduates reveals a \$6,000 disparity in median salary by gender (a \$40,000 median for males and \$34,000 for females; the disparity in average salary is even larger -- \$45,000 and \$36,600). There is virtually no disparity in median salary by race and ethnicity, (\$40,000 for minority males and \$33,900 for minority females). But some disparity exists as to average salary (\$42,400 for minority males and \$34,800 for minority females). These disparities may reflect different career preferences, may be mere statistical artifacts, or may reflect other factors at work in relevant employment markets.

As is true with admissions, competition for placement opportunities has increased significantly among schools across the nation. Judging from the excellent placement rate, employers seem pleased with the work of FSU law graduates, yet prospects for future lawyers are a function of the overall employment picture in Florida and nationwide. The employment opportunities for young lawyers have recently improved but it is quite possible that this trend will be adversely affected by recent developments in the global economy.

Licensure Examinations

FSU graduates performed on the summer 1997 Florida Bar Exam at a high rate (90%) that exceeds the state-wide average (84%). A similar pattern is evident from 1998 figures (85% pass rate for FSU compared to an 81% average passage rate for the state as a whole). This performance is comparable to that of the state's other public law school. Passage rates for individual law schools must be assessed with an eye to the jurisdictions in which their graduates seek to be admitted to practice, since there is wide variation in passage rates from state to state. It is evident, however, that FSU is preparing its students quite well to take and pass the bar examination. The Florida bar examiners do not compile or report performance data based on race. Nation-wide studies of the performance of law graduates on bar exams often consider reports on individual passage on either the July or February administration of a given state's bar exam, and any further analysis of bar passage in Florida would very likely need to incorporate similar analysis.

Faculty Research

The faculty has made an important collective commitment to embrace a more ambitious scholarly agenda. This objective is being pursued against the backdrop of at least three distinct generations of faculty hires. FSU has a number of senior professors who came to the law school at its inception during a time when its institutional focus was largely on teaching. Since that time, mid-level professors were hired with an eye to significant scholarly promise. Many of the school's junior professors are attempting to integrate both creative teaching that integrates theoretical and practice perspectives with a desire to achieve high scholarly standards.

The faculty has made significant progress in setting and achieving ambitious scholarly objectives. A substantial number are very well published in nationally regarded journals. Others who had not published in quite some time have begun to do so. Faculty members report an interest in reading and discussing one another's writing, and recognition of colleagues' contributions is notable in many faculty members' publications. The College provides very generous financial support for summer research as well as paying for student research assistants and professional travel to advance scholarly goals. Research leaves are available to tenured faculty members during the regular academic year. Many other schools provide more significant released time particularly in the year before junior faculty members come up for tenure, and the adoption of such a strategy would enable the school to continue to move forward in building and sustaining a broad-based improvement in scholarly productivity.

Workloads

The faculty workload during the academic year is approximately 10 to 11 credit hours per year, that is, approximately three to four courses. The College's faculty members are also able to teach during summer school, at a relatively high rate of compensation (approximately 1/5 of their academic year's salary).

The teaching load for the standard academic year falls on the high side for schools among the top 20 nationally or with aspirations in that direction. However, teaching load was not mentioned as a problem by either the most recent accreditation report or faculty with whom the consultants spoke during their visit. In assessing teaching loads, it is also important to bear in mind how release time is made available to provide an opportunity for faculty scholarly endeavors. In some schools, faculty members who are not actively engaged in scholarship are asked to teach additional courses. In many leading schools, junior faculty members who have not yet achieved tenure are given a semester's release time in the year prior to their tenure review. FSU apparently does not require untenured faculty to teach in its summer school program.

University of Florida Law Program Review

The following information pertains to proviso measures that are relevant to the law programs under review. No information is accordingly provided as to proviso criteria 1, 2, 5, 9, 10, 12, and 14. For example, measures 1 and 2 deal with undergraduates and therefore they do

not apply to a graduate program like Law. There do not appear to be significant issues raised by this information.

- Measure 3. Bar examination: 85.79% (July 1998 Florida Bar Examination)
- Measure 4. Cost of instruction per FTE student: \$6,548.48 per FTE in 1996-97.
- Measure 6. Publications in refereed journals: Refereed law journals or reviews are extremely rare. Virtually all are operated entirely by students. During the period 1992-1996, the UF faculty published 1.44 articles per capita, with 57% publishing and an average production of 2.52 articles for those who did publish during this period.
- Measure 7. Ratio of externally funded contracts and grants to state-funded research: 0.69 in 1996-97.
- Measure 8. Employment of graduates: Placement rates for law graduates are commonly measured at a point six months after graduation. For the 1997 class that figure was 82.8%
- Measure 11. Ratio of students to ranked faculty: BOR data indicate 16.49/1 for the 1996-97 academic year. The school itself reports 20.5/1 for the 1997-98. The difference may be due to loss of faculty or may result from the application of changing ABA criteria that govern calculation of ratios for comparative purposes among law schools nationally.
- Measure 13. Average number of commercial, as opposed to non-commercial books, per rated faculty member: 0.54 during a two year period.

Productivity in Relation to Peer Institutions

The College appears to be quite productive with regard to both its educational program and its research efforts. It has developed a comprehensive curriculum that meets the needs of J.D. students preparing for legal careers as well as a master's degree in comparative law and a renowned master's program in tax law. Its cycle of first-year admissions in both the fall and spring semester means that it is able to enroll and graduate students on a relatively continuous basis (rather than, as is true in many of its peer schools, only once a year). This arrangement does, however, necessitate that the school offer core courses in virtually every semester, creating an added strain on staffing.

In legal education, the relationships between class size, quality and productivity are complex. Legal education has, for many years, been structured to provide first-year instruction using relatively large classes (often ranging in size from 70 to 150 students). Teachers in these courses are often experts in the use of the "Socratic method," a means of interacting with

individual student which is designed to engage the class as a whole. Standard lecturing is little used in this setting. Faculty members generally teach solo, without benefit of teaching assistants and generally without the benefit of small-group break out sessions. Faculty members themselves develop essay examinations and grade by themselves the many student papers. Both senior and junior faculty members generally are involved in teaching first-year courses. Given that, with very few exceptions, only the first-year curriculum is required to be taken, there is a significant institutional incentive to put the most effective classroom teachers there, and permit the students to select less-popular teachers who offer elective upper-class courses. Moreover, the first-year curriculum is viewed in legal education as the crucial foundation for all that follows and these courses are almost never offered by “less-expensive” adjunct faculty who are commonly enlisted to offer advanced courses in specialized fields.

It should be noted, too, that there is no uniform correlation between “high cost” and small classes in the context of legal education. Although clinical courses are relatively small, providing a high faculty/student ratio, clinical faculty tend to be paid significantly less than tenure-track faculty.

Placement

Placement success is now of great importance to graduating and prospective law students. Measuring success as of six months after graduation, the UF class of 1995 had a 79.6% placement rate, the 1996 class a 86.6% rate and the 1997 class a rate of 82.8%. This last seems somewhat low given the current relatively high demand for new lawyers. The inordinate importance this factor is given by U.S. News & World Report in its rankings of American law schools is a reason for renewed efforts to improve the placement rate. Approximately 81% of the graduates from 1995-1997 remain in Florida.

Licensure Examinations

UF graduates performed well on the summer 1998 Florida Bar exam, posting a passage rate that, as usual, exceeded the state-wide average (UF passage rate was 85.79% with a state-wide average of 81.54%) and was comparable to that of the state’s other public law school.

Faculty Research

Legal scholarship seeks to illuminate the system of justice that provides the foundation of civil order and is therefore crucial to other human endeavors whether in the sciences or humanities. It also endeavors to improve the ways in which law interacts with actual human behavior and increases the efficiency by which complex transactions can be completed. The law likewise plays a vital role in creating a society that maximizes human creativity and surplus wealth that is essential to correcting the problems associated with poverty and deprivation, and legal scholarship can contribute significantly to this process.

Members of the UF law faculty have demonstrated an increasing commitment to legal scholarship over the years. The College supports faculty research through both summer grants and sabbaticals. Approximately 15 grants are provided each summer and all faculty members who

have applied in recent years for sabbatical leave have received it. A distinguished faculty scholar has been appointed as associate dean for faculty development, with the charge to encourage and guide younger, untenured faculty in their efforts to meet the scholarship standards for tenure.

Workloads

Faculty members are expected to carry approximately 10 or 11 credit hours of teaching responsibilities per academic year. This load was not mentioned as a problem by faculty members during the visit. The College may, however, face increased competition to retain its most productive faculty members and to recruit potential "stars" since schools among the top twenty have developed more generous leave policies and/or lower average teaching loads.

Exploration of Alternative Funding Sources

The legal academy has very limited access to research support through the federal government or other avenues. However, thanks in substantial part, to the Center for Governmental Responsibility, UF has achieved considerable success in attracting contracts and grants. The school's current dean has also been very effective in securing substantial funding from outside sources to bring about partnerships with the business community, bench and bar, in the use of advanced information technology.

The College appears to have been extremely successful in raising private funds. Its annual fund of \$600,000 and endowment of approximately \$30 million as of summer 1998 provide a substantial supplement to resources raised through other means.

University of South Florida Public Health Program Review

Because the college only offers graduate degrees, some 1997-98 proviso language measures were not appropriate. For example, measures 1 and 2 deal with undergraduates and therefore do not apply to the graduate Public Health program at USF. Responses, therefore, have been provided for measures 4, 6, 7, 8, 11, and 13. For some measures five years of data are not available. Note that since none of the programs in the College require licensure or certification, no data are provided for measure 3.

Measure 4. Cost of instruction per full-time equivalent student. For 1995-96 the total expenditures per FTE student credit hour was recorded as \$9,562. For 1996-97, the total expenditures per FTE student was recorded as \$11,592.

Measure 6. Average number of refereed journal articles per ranked faculty member.

Average Number of Refereed Journal Articles per Ranked Faculty Member				
1992-93	1993-94	1994-95	1995-96	1996-97
2.57	2.32	2.38	2.36	2.08

Measure 7. Ratio of state funded research to externally funded contracts and grants.

Ratio of State Funded Research to Externally Funded Contracts and Grants				
1992-93	1993-94	1994-95	1995-96	1996-97
0.27/1	0.67/1	0.14/1	1.06/1	0.71/1

Measure 8. Percent of students employed full-time upon graduation. Based of FETPIP data, the number of master's level public health students employed full time in Florida in 1990-91 was 90 percent. The number of these individuals employed full-time in Florida in 1996 was 93 percent.

Measure 11. Ratio of ranked faculty to students.

Ratio of Ranked Faculty to Students				
1992-93	1993-94	1994-95	1995-96	1996-97
7.61/1	8.11/1	8.56/1	7.81/1	7.29/1

Measure 13. Average number of university commercial, as opposed to non-commercial press books per ranked faculty member.

Average Number of University Commercial Press Books per Ranked Faculty Member				
1992-93	1993-94	1994-95	1995-96	1996-97
0.0612	0.0918	0.2039	0.1892	0.1300

Hours To Degree

After the hours to degree accountability baseline was developed for Spring 1995 graduates, the universities spent considerable time and effort analyzing information on hours attempted from the transcripts of the graduates of Spring 1995. It became apparent that precision beyond whole hours was needed to accurately express the hours students were taking beyond those required for their degrees. Thus, beginning with the data collection for Spring 1996, the data have provided additional precision by adding decimal fractions to the hours.

Systemwide, the fluctuation from one set of Spring graduates to another is negligible (see Table 1, page 13). Since a very substantial proportion of the degree programs had the number of required hours reduced in 1996, one would expect the number of hours students take beyond degree requirements to increase in the more recent years over the figures for 1995 and 1996. It is a tribute to better advising and enhanced student awareness that apparently have contributed to hold the numbers down.

There is, however, a larger difference between the Systemwide Spring 1998 figure of 13.78 and the 14.48 Systemwide 1997-98 annual figure. Interestingly, extra hours attributable to both lower level courses and upper level courses taken beyond degree requirements are lower for the Systemwide 1997-98 annual data as compared to the Systemwide Spring 1998 figures. On the other hand, the number of hours dropped, failed, and repeated are each approximately one-fourth of an hour to two-fifths of an hour higher for the annual data in comparison to the Spring 1998 data.

Baccalaureate Degree Production, Graduation, and Retention

The following language appeared in the 1997-98 General Appropriations Act and nearly identical language appeared again in the 1998-99 General Appropriations Act.

Educational and General Activities
172A Lump Sum
Performance Based Budgeting - Instruction
from General Revenue Fund 3,300,000

Funds in Specific Appropriation 172A are provided to establish a performance recognition and incentive fund which measures the current effectiveness and improvements in baccalaureate degree production, graduation and retention. The Board of Regents shall develop procedures for measuring and allocating funding to recognize the following three indicators: (1) the ratio of baccalaureate degrees to FTE enrollment; (2) a combined graduation-retention index for first-time-in-college students; and (3) five year change in FTIC and A.A. transfer graduation rates. The methodology developed by the Board of Regents shall be submitted to the Office of Program Policy Analysis and Government Accountability (OPPAGA) for review. The Board of Regents shall incorporate OPPAGA's findings into the methodology used to allocate the performance incentive fund.

The tables on the following pages display base data similar to that used to develop allocations of \$3.3 million to the universities for 1997-98 and 1998-99. One-fourth of the appropriation was allocated based on baccalaureate degrees per 100 student FTEs, one-fourth based on a graduation-retention index, and the remaining one-half based on improvement in graduation rates over time.

Baccalaureate Degrees per 100 Student FTEs

Table 2 displays the number of baccalaureate degrees awarded per 100 student FTEs. In each allocation, the data were analyzed for current effectiveness and improvement over time. For current effectiveness, three indices were constructed, one each for the categories of FTICs, AA-Transfers, and Other students, using the most recent available data. The indices were then weighted based on the percentage of students FTEs each university had in each category and scaled by the number of undergraduate FTEs. One-half of the funds for this section were allocated based on this weighted, scaled index.

**Table 2. Baccalaureate Degrees
per 100 Student FTEs**

SUS	33.41	34.90	32.90	33.46

Improvement over five years was calculated by finding, for each category of students, the difference between the number of degrees granted per 100 student FTEs for the most recent data and for that of the period five years earlier. An index was then constructed for each category of students and, again, the indices were weighted based on the percentage of student FTEs each university had in each category and scaled by the number of undergraduate FTEs. The remaining one-half of the funds for this section were allocated based on this weighted, scaled index.

First-Time-In-College Graduation-Retention Index

Table 3 displays the base data for an FTIC graduation-retention index used for allocating one-fourth of the \$3.3 million total appropriation. Here again, the allocation was based on current effectiveness and improvement over time.

Current effectiveness was determined by using the percentage of students who either graduated or were retained, in the 2nd through 7th years after original enrollment, for each of six different cohorts and then weighting those percentages with weights which placed heavier weighting on the more recent years. The weighted average for each university was then used to construct an index which was scaled based on the undergraduate student FTEs of each university. The scaled index was then used as the basis for allocating one-half of the funds for this section.

Improvement over a four-year period was determined by constructing a weighted average graduation-retention index in the manner described for current effectiveness. The difference between the current effectiveness and improvement indices was scaled by the undergraduate student FTEs for each university and the result was the basis for allocating the remaining one-half of the appropriation in this section.

Five-Year Change in Graduation Rates

Tables 4 and 5 display base data similar to that used to allocate one-half of the \$3.3 million appropriation on the basis of improvement in graduation rates for FTICs and AA-Transfers. Although the proviso language in the General Appropriations Act specified a five-year change, data were available to analyze a two-year change for FTICs and a four-year change for AA-transfers for the 1997-98 allocation. In the subsequent year, data were available to add another year to both analyses. Here, again, the allocation was divided between current effectiveness and improvement over time.

Current effectiveness was determined by calculating a simple average of the five most recent years of 6-year FTIC graduation rates and a similar average of the five most recent years of 4-year AA-Transfer graduation rates. Indices were constructed from the averaged graduation rates and then the average of the two indices was weighted by the percentage of part-time undergraduate students. After scaling for the number of undergraduate student FTEs, the result

was the basis of one-half of the allocation in this section.

Improvement over time was determined in a similar manner with simple averages of graduation rates from earlier years compared to the averages discussed above. Indices of the differences were calculated, averaged, and scaled by the number of undergraduate student FTEs for each university. The result was the used to allocate the remaining one-half of the allocation in this section.

Baccalaureate Graduation and Retention Rates

There are eight sets of tables displaying baccalaureate graduation and retention rates for each university along with systemwide data for FTICs and AA-Transfers. There are separate sets of tables for all students and for minorities as well as for students who graduated at the university at which they started or anywhere within the SUS. The data track cohorts of students who entered as early as 1985 and as recently as 1996.

This paragraph and the next two will provide a detailed explanation of the data in graduation and retention tables. In general, the graduation and retention tables track cohorts of students based on the year in which they entered the State University System. The FTIC tables track students who are entering the SUS for the first time (Freshmen) in either the fall semester or the previous summer semester, whereas the AA-Transfer tables track students who have graduated from one of Florida's 28 Community Colleges who enter the SUS during the fall semester or the previous summer semester.

This explanation uses data from the first page of Table 6. For example, the 1985 FTIC cohort has 13,103 students who entered an SUS institution in either the Summer 1985 semester or the Fall 1985 semester. Of those 13,103 students, 10,554 re-enrolled for at least one semester during 1986-87 and three graduated by the end of the Summer 1987 semester. The three graduates represent 0.02 percent of the original 13,103 students and the 10,554 students retained represent 80.55 percent of the original 13,103 students.

Moving down the table, looking at the third year of data, the 105 students who graduated that year plus the three who graduated in the preceding year amount to 0.82 percent of the original 13,103 students. Note that the "Percent Graduated" is based on the number of students who graduated in the current year and all preceding years. The 8,897 students retained, comprised of the 8,894 who re-enrolled plus the three who graduated in the previous year, amount to 67.90 percent of the original 13,103 students. Note that in each case, the "Number Retained" includes those returning that year plus all of those who graduated in the prior years.

FTIC Graduation and Retention Rates

FTICs Who Graduate Where They Started

Table 6 displays graduation rates for all FTIC students who graduated from the institution at which they began their college education. The systemwide six-year graduation rate for this group of students slipped very slightly from 54.51 percent for the cohort entering in 1990 to 53.86 percent for the cohort entering in 1991. This continues a slight trend downward from the all-time high figure of 54.56 percent registered by the 1989 cohort. For unknown reasons, only

two of the nine institutions, Florida A&M University and the University of South Florida, had an increase in the six-year graduation rate for this group. Fluctuation in this rate, as well as a continued decreasing of the systemwide rate, may become commonplace as our urban institutions become an increasing proportion of the total System. In general, our urban institutions tend to have a higher percentage of students who attend on a part-time basis, which has a lowering effect on the six-year graduation rate. The six-year retention rate for this group fell from 63.41 percent for the 1990 cohort to 62.18 percent for the 1991 cohort.

FTICs Who Graduate Within the SUS

Table 7 displays graduation rates for all FTIC students who graduated anywhere within the State University System. These rates, similar to those discussed immediately above, continue a very slight downward trend. The systemwide six-year graduation rate for this group of students was 59.38 percent for the cohort entering in 1991 as compared to 59.61 percent for the 1990 cohort. Here again, only two of the nine institutions, Florida A&M University and the University of South Florida, had an increase in the six-year graduation rate for this group. The six-year retention rate for this group fell slightly from 70.74 percent for the 1990 cohort to 70.11 percent for the 1991 cohort.

Cohort is FTICs from fall semester and previous summer. Students are followed through the end of summer. Students are reported if they stay at the same university where they first enrolled. Percentages are cumulative. Retention includes those who re-enrolled plus graduates of previous years. (C:FTIC-Stay-96)

AA-Transfer Graduation and Retention Rates

AA-Transfers Who Graduate Where They Started

Table 8 displays graduation rates for all AA-Transfer students who graduated from the institution at which they entered the State University System. The systemwide four-year graduation rate for this group of students increased slightly from 65.43 percent for the cohort entering in 1992 to 65.76 percent for the cohort entering in 1993. This continues an upward trend that began with the 1985 cohort when the four-year graduation rate was 52.18 percent. Four-year retention rates for this group fell slightly from 75.70 percent for the 1992 cohort to 75.25 percent for the 1993 cohort.

AA-Transfers Who Graduate Within The SUS

Table 9 displays graduation rates for all AA-Transfer students who graduated anywhere within the State University System. These rates, similar to those discussed immediately above, continue an upward trend. The systemwide four-year graduation rate for this group of students was 68.33 percent for the cohort entering in 1993 as compared to 67.74 percent for the 1992 cohort. The four-year retention rates for this group decreased slightly from 79.51 percent for the 1992 cohort to 79.26 percent for the 1993 cohort.

FTIC Minority Graduation and Retention Rates

Minority FTICs Who Graduate Where They Started

Table 10 displays graduation and retention rates for minority FTIC students who graduated from the institution at which they began their college education. The systemwide six-year graduation rate for this group of students increased from 48.29 percent for the cohort entering in 1990 to 49.79 percent for the cohort entering in 1991. This continues a strong upward trend from the 42.60 percent registered by the 1985 cohort. The six-year retention rate for this group also increased from 62.06 percent for the 1990 cohort to 62.63 percent for the 1991 cohort.

Minority FTICs Who Graduate Within The SUS

Table 11 displays graduation rates for minority FTIC students who graduated anywhere within the State University System. These rates, similar to those discussed immediately above, continue a strong upward trend. The systemwide six-year graduation rate for this group of students was 53.61 percent for the cohort entering in 1991 as compared to 51.56 percent for the 1990 cohort. The six-year retention rate for this group also increased from 67.36 percent for the 1990 cohort to 68.64 percent for the 1991 cohort.

AA-Transfer Minority Graduation and Retention Rates

Minority AA-Transfers Who Graduate Where They Started

Table 12 displays graduation rates for minority AA-Transfer students who graduated from the institution at which they entered the State University System. The systemwide four-year graduation rate for this group of students decreased slightly from 61.93 percent for the cohort entering in 1992 to 60.50 percent for the cohort entering in 1993. This represents a slight downturn in what has otherwise been a strong upward trend that began with the 1985 cohort when the four-year graduation rate was 45.35 percent. Four-year retention rates for this group fell slightly from 75.56 percent for the 1992 cohort to 74.60 percent for the 1993 cohort.

Minority AA-Transfers Who Graduate Within The SUS

Table 13 displays graduation rates for minority AA-Transfer students who graduated anywhere within the State University System. The systemwide four-year graduation rate for this group of students was down slightly at 62.93 percent for the cohort entering in 1993 as compared to 63.85 percent for the 1992 cohort. The four-year retention rates for this group decreased slightly from 79.25 percent for the 1992 cohort to 78.97 percent for the 1993 cohort.

Performance-Based Incentives

Proviso language in the 1998-99 General Appropriations Act, appearing below, instructed the Board of Regents to allocate \$2.5 million, one-half to institutions which had implemented internal procedures for allocating resources on the basis of performance and one-half on the basis of baccalaureate degrees granted and those within 115 percent of degree requirements.

From the funds in Specific Appropriation 179, \$2,500,000 is provided for a Performance Based Incentive Fund for allocation to each university, including the Special Units. From these funds one-half shall be allocated to institutions which have implemented an internal procedure, as approved by the Board of Regents, for allocating resources for instruction and research on the basis of performance. The remaining one-half shall be allocated based on the number of baccalaureate degrees awarded in 1997-98 and the number of degrees earned at a level of 115% of the degree requirements or less. Baccalaureate degrees earned by first-time-in-college students shall receive a weight of 2.0, AA transfer students shall receive a weight of 2.0, and all other degrees shall be at a weight of .5 in determining the number of degrees eligible for performance incentive funding.

Internal Allocation Procedures

University of Florida

The Bank system of the University of Florida delivers a data-based productivity model to assist judgments about the allocation of university resources. Quality is defined through the Florida Quality Evaluation Project in comparison with peer institutions. Measures include student quality, pass rates on licensure exams, faculty publications, grants and contracts, performances and exhibits, national and international awards and fellowships, student and alumni surveys, and so forth. These measures are combined with productivity and cost data in the Bank to arrive at judgments about budget adjustments each year. Colleges receive a Bank reward for excellent performance compared to benchmarked peers or for improving performance.

Florida State University

The FSU funding model uses a number of measures to allocate funds among academic units. The following are specific measures used by FSU: number of classes taught per faculty member, student FTE generated per faculty FTE, average class size per unit, number of grants proposals per faculty member by academic unit, number of grants awarded per faculty member by academic unit, external development funds per faculty member by academic unit, and past trends of expenditures per student FTE and faculty FTE. Deans provide regular reports to the provost about productivity measures. A final feature of the plan calls for distribution of incentive and enhancement resources to reward units for special successes in support of specific institutional goals.

Florida A&M University

The performance measures used by FAMU are classified into four areas: student excellence, cost efficiency, graduation performance, and faculty excellence. Student excellence measures include: retention rates, percent of classes with less than 25 students, percent of students with excess credit hours, and number of National Achievement, Hispanic, and Presidential Scholars. Cost efficiency will be based on FTE instruction cost and FTE degree cost. Graduation performance measures are: licensure pass rates, graduates employed full-time, and graduate/professional school admission. Finally, faculty excellence will be measured by: number of refereed journal articles, external research grants, average number of press books, community service, and patents, trademarks, or other intellectual property. The mandated performance measures have been incorporated in the annual budget allocation process for implementation.

University of South Florida

The University of South Florida is preparing to implement Accountability and Excellence Process to evaluate academic unit productivity. Data on several key performance indicators are compiled from multiple sources. Performance is measured on such items as enrollment, graduation, scholarly productivity, sponsored research, and cost. University goals and priorities for performance improvement are initially established, then each college dean and provost sets goals for each department. Each college dean submits an annual budget request accompanied by documentation of progress toward selected goals. The provost considers these measures, as well as other measures of quality, when making budget allocations to academic units.

Florida Atlantic University

Florida Atlantic University focuses on performance as an internal guide to allocating resources in the development of annual academic budgets. Chief among these performance measures is how well academic units meet student demand. Both first time in college and

community college transfer students are ensured access to courses that they need to maintain progress toward the degree through a direct relationship of FTE production to budget allocation. FAU also references various accountability performance indicators as guides in the allocation process: course sections per faculty person year, average class size, and credit hours produced per faculty person year. In addition, FAU is undertaking a major performance-based review of research productivity. Finally, internal performance-based allocation procedures demand an assessment of the quality of instruction and other forms of faculty-student interaction. Each semester, FAU assesses student experiences in each course. In addition to the mandated statewide assessment items, FAU analyzes fourteen locally developed items and provides each dean, chair, and faculty member with college and department norms. FAU requires that academic managers use these measures as benchmarks for improving performance. Finally, FAU has a major project underway to assist units in improving student retention and graduation rates and uses those data as primary determinants in awarding funds for improving performance.

University of West Florida

The University of West Florida Resource Allocation Model is based on the allocation of faculty lines to the colleges in proportion to the three-year weighted average of modified student FTE generation. The weights are based on course level (lower division, upper division, graduate classroom, and thesis/dissertation), instruction type/class size, and degree of off-campus course and program offerings. Each college's projected share of available faculty discretionary lines are calculated using a percent calculated of the grand total three-year weighted average of the modified student FTE generation data. USPS positions are allocated based on the number of academic departments and number of faculty lines. Expense, OCO, and OPS (other than adjuncts) are allocated in the same manner.

University of Central Florida

UCF developed the Pegasus Model for the internal allocation of resources for instruction and research. The instruction allocation is partially based on student credit hour production by level of student; lower, upper, graduate, and thesis/dissertation. Counseling is incorporated into the model depending on the number of majors by unit. Research and administration are allocated based on fixed fractions of instruction. The model calculates incremental faculty positions for each unit from the data using productivity factors by level and it derives dollar allocations from the incremental positions, using national average salary figures by discipline from Oklahoma State University survey data. Both staff positions and non-salary funds are included in the model.

Florida International University

Based on the University of Central Florida's Pegasus Model and the University of

Florida's Bank, FIU developed the Panther Model for budget allocation in academic affairs. Consistent with the UCF model, the Panther model uses three sources of productivity data: student enrollment data, scheduled credit hours and number of program majors, and number of faculty positions. Accordingly, FIU's model uses concepts from the UF Bank to account for the fact that some of the academic units are investor programs (producing surpluses), others are investment programs (producing deficits), while the remainder may be a combination of both investor and investment programs when it comes to faculty positions or operating budget. Another similarity to the UF Bank is that FIU's Panther model considers the state-funded research grant activity for each academic unit. Viewing the FIU Bank as a productivity model in which academic units are rewarded for bettering their status is an important part of the Panther model basic assumption. The ultimate goal of FIU's academic affairs allocation model will be greater quality programs through more efficient use of state resources.

University of North Florida

UNF planning and budget decisions are guided by UNF's six institutional priorities. Instruction and research resource allocation criteria and their application are linked to the institutional priorities and are made at the college level. Three criteria are used: (a) meeting enrollment targets; (b) scholarship productivity; and (c) instruction-related laboratory and learning tool readiness. The application methodology used for each criteria is: (a) enrollment targets – if a college does not meet its enrollment target, resources are removed; if targets are exceeded, college are allocated additional resources; (b) scholarship productivity – numbers of refereed articles, books, and conference presentations are calculated; if a college improves its performance additional dollars for faculty development and support are allocated; if a college fails to improve, the base level of support remains constant; and (c) instruction-related laboratory and learning tool readiness – as part of the UNF planning and budget process, colleges provide a narrative which documents needs and past uses of resources; requests are assessed by academic affairs staff in the context of institutional and division priorities and funded competitively.

Florida Gulf Coast University

The internal procedures for allocating I&R funds based on performance have been made part of the Institutional Effectiveness Plan for Academic Affairs at Florida Gulf Coast University. Each program has an institutional effectiveness plan. How well these plans are achieved and what their plans are for the coming year become the basis upon which additional I&R funding will be distributed.

Baccalaureate Degrees Granted

Table 14 displays data for 1997-98 for Baccalaureate degrees granted along with those

granted with 115 percent, or less, of the number of credit hours required for the degree. It is not surprising to see that FTIC students have the lowest percentage of degrees granted within the 115 percent threshold. They have the largest number of hours to obtain at the university at which they enroll. That is, an AA-Transfer will typically need to take only 60 credit hours to complete a baccalaureate degree once they are enrolled at a university; whereas, an FTIC will typically have to obtain 120 credit hours to satisfy degree requirements. The category of “Others” are students who transfer into the universities with at least some credit hours but without an AA degree from one of Florida’s 28 Community Colleges.

At the date of this publication, the one-half of the \$2.5 million appropriation that is to be allocated based on baccalaureate degrees granted had not been completed. It is expected, however, that the data displayed in Table 14 will be the basis for making that allocation.

¹ Baccalaureate degrees granted to FTIC students who completed degrees with 115 percent, or less, of the credit hours required for their degree.

² Baccalaureate degrees granted to AA-Transfer students who completed degrees with 115 percent, or less, of the credit hours required for their degree.

³ Baccalaureate degrees granted to other than FTIC or AA-Transfer students who completed degrees with 115 percent, or less, of the credit hours required for their degree.

Systemwide Measures

The Board of Regents, on November 20, 1998, approved accountability measures to be used for measuring systemwide performance. The following paragraphs and tables explain the measures and data sources and display the System's rank among the fifty states for those measure for which such comparisons are possible.

Meet SUS Enrollment Plan

This is one measure for which it is not possible to make national comparisons. Table 15 displays a comparison of actual enrollment with funded enrollment for 1997-98 by university and level. Systemwide, actual enrollment is within one percent of funded enrollment. Most of the large variances in lower level and upper level enrollment are directly attributable to the systemwide course-leveling project which moved many courses from upper level to lower level, thereby making the funded FTE for upper level too high relative to actual and the funded FTE for lower level too low relative to actual enrollment.

Table 15. Funded 1997-98 Compared to Actual 1997-98 Enrollment

		1997-98 Funded	F T E 1997-98 Final	Number Different	Percent Different
SUS E&G	Lower	35,078	43,615	8,537	24.34%
	Upper	72,934	64,458	(8,476)	-11.62%
	Grad Class	19,530	18,332	(1,198)	-6.13%

Percentages are based on actual FTE numbers that are not rounded to nearest whole number. 1997-98 Funded does not include all course leveling adjustments made in 1998.

SUS FTIC Graduation Rates

Table 16 displays FTIC graduation rate data for public universities in the fifty states and the District of Columbia for institutions in Carnegie Classifications similar to those of the SUS institutions. Finding a consistent source for university graduation rates has been an ongoing difficulty. The one most used has been data downloaded from the U.S. News and World Report web site of college rankings.

As with all survey type data, limitations exist. Primarily, not all those surveyed respond thereby limiting the comparability of the data. This is particularly difficult when a series of years is needed.

The data reported in U.S. News and World Report are the graduation rates by university. To report the graduation rate for each state, a method was developed to determine a weighted average. First-time-in-college (FTIC) headcount enrollment were obtained from the National Center for Education Statistics, Integrated Postsecondary Education Commission enrollment data base for each university reported in the U.S. News and World Report data. The FTIC enrollment data were multiplied by the graduation rate for each university. When the data were aggregated for each state, the FTIC enrollment and the transformed graduation rate were summed. At the state level, the transformed graduation rate was divided by the FTIC enrollment to provide the weighted graduation rate.

SUS FTIC Retention Rate

Tables 17 and 18, below, display six-year FTIC and four-year AA-Transfer retention rates, respectively. Retention rate is a measure for which there are no data available on which to make comparisons among the states; thus, a five-year comparison of the most recent SUS data is used for this measure.

Table 17. State University System Six-Year FTIC Retention Rates					
	Cohort Year of Entry				
	1987	1988	1989	1990	1991
FTICs	69.2	69.6	70.2	70.7	70.1

Table 18. State University System Four-Year AA-Transfer Retention Rates					
	Cohort Year of Entry				
	1987	1988	1989	1990	1991
AA-Transfers	77.4	78.3	79.3	79.5	79.3

Sponsored Research Expenditures

Table 19 displays total sponsored research and development expenditures per state funded research expenditures for public universities in the fifty states and the District of Columbia for institutions in Carnegie Classifications similar to those of SUS institutions. Fluctuations in this ratio are caused by, among other factors, changes in the extent to which state resources are dedicated to research and the extent to which sponsoring agencies make research resources available to public universities. It is significant that the SUS has ranked above the US average for each of the seven years displayed.

University Endowments and Annual Giving

Table 20 displays endowment data for public universities in Carnegie Classifications similar to those of the State University System universities. Endowment data were downloaded from the Chronicle of Higher Education web site. The data are the result of a survey by the National Association of College and University Business Officers (NACUBO). The NACUBO web site did not have the data available.

The primary difficulty of this information is the same as for all surveys, not all universities respond. For Florida, only five universities reported all three years of data, University of Florida, Florida State University, Florida Atlantic University, University of West Florida, and University of Central Florida. The University of South Florida reported only for two years, 1996 and 1997, and therefore, was excluded from the data in Table 20.

It should be noted that some states are unrepresented in the listing for endowments. Louisiana and the District of Columbia only had private universities listed. Three states, Montana, North Dakota, and Wyoming, had no universities on the endowment list.

Degrees Granted

Tables 21 through 24 display five years of degrees granted data for Baccalaureate, Masters, Doctoral, and First Professional levels for public universities in Carnegie Classifications similar to those of State University System universities.

Degrees granted data are obtained from the National Center for Education Statistics (NCES), Integrated Postsecondary Education Data System (IPEDS). IPEDS data are maintained on-line and are generally the most consistent source of data on universities. The number of degrees granted are contained in the Completions data base which includes degrees by level.

While the data source may be the most comprehensive, it is still a survey and subject to their limitations. Data for some institutions may be late or not arrive at all.

University Measures

As an integral part of the Board of Regents' overall accountability plan for the State University System, each university has been asked to develop a set of measures for which the university and the university's president will be held accountable. The measures, together with goals for future performance, will be submitted to the Chancellor for review and negotiation. Measures submitted by an individual university are expected to be consistent with that university's mission as approved by the Board of Regents.

Once the Chancellor and the university President have agreed upon a set of measures, baseline data will be developed and goals for future performance on each measure will be agreed upon by the university President and the Chancellor. These measures and the university's performance on them will be part of the university President's overall performance review and will be made available to the Regents for their review.

To the extent feasible, performance of an individual university on its approved measures is expected to be measurable relative to its peer institutions.

Integration of Strategic Plan, Legislative Budget Request, and Accountability

A major thrust within the State University System is to integrate planning, budgeting, and accountability into a systemic action plan. For almost two years, public discussion and hearings were held to develop the strategic plan approved by the Board of Regents on November 20, 1998. This plan, consisting of 12 goals, sets the direction for the State University System for the next five years. Incorporated in it is the vision that all ten institutions should have specific missions, goals, and performance objectives and measures.

The Legislative Budget Request for 1999-2000 was developed to be policy driven based upon the Strategic Plan. There is a critical link between the 13 issues in the Legislative Budget Request and the Strategic Plan. In the past, increases in undergraduate enrollment have been the predominant factor in obtaining discretionary funds. While growth was the primary source for new dollars in the past, this action plan envisions a systemic funding model driven by not only enrollment growth but also by institutional mission, goals, performance expectations, and accountability measures. The Legislative Budget Request is not only related to the strategic plan, but it incorporates systemwide and institutional accountability. As required by state statutes, the appropriation will contain accountability measures. It is the desire of the State University System that the six systemwide measures, discussed above, be incorporated in the appropriation.

As the State University System, we must build within our institutions a culture of excellence which constantly enhances the capacity of our institutions to achieve their specific missions. This action plan is designed to provide a frame of reference for enhancing quality of undergraduate and graduate education, while improving effectiveness and efficiency of our institutions. In this manner, the State University System will demonstrate its accountability to the citizens of the State of Florida, Regents, the Legislature, and the Governor. We intend to incorporate two distinctly different types of accountability measures:

1. The six systemwide measures listed above, and;
2. Institution-specific measures which are in the process of being developed.

The graphic on the following page depicts the interrelationships among the Strategic Plan, the Legislative Budget Request, and Accountability.

Action Plan for Planning, Budgeting, and Accountability
